Contents

Part I Definitions and Strategies

1 Changeability – An Introduction
H. ElMaraghy and H.-P. Wiendahl 3
1.1 Motivation 3
1.2 Evolution of Factories 7
1.3 Deriving the Objects of Changeability 8
1.4 Elements of Changeable Manufacturing 10
1.5 Factory Levels 11
1.6 Changeability Classes 12
1.7 Changeability Objectives 13
1.7.1 Manufacturing Level 14
1.7.2 Assembly Level 14
1.7.3 Factory Level 15
1.8 Changeability Enablers 15
1.8.1 Manufacturing Level 16
1.8.2 Assembly Level 17
1.8.3 Factory Level 17
1.8.4 Reconfigurable Process Planning Level 18
1.8.5 Production Planning and Control Level 19
1.9 Changeability Process 19
1.10 Conclusion 22
References 23

2 Changing and Evolving Products and Systems – Models and Enablers
H.A. ElMaraghy 25
2.1 Introduction and Motivation 26
2.2 The Hierarchy of Parts and Products Variants 27
2.3 Evolving and Dynamic Parts and Products Families 32

2.4 Modeling Products Evolution – A Biological Analogy 34
2.5 Design of Assembly Systems for Delayed Differentiation of Changing and Evolving Products 35
2.6 Process Planning – The Link Between Varying Products and their Manufacturing Systems 37
2.6.1 Existing Process Planning Concepts 37
2.6.2 Process Plans Changeability 38
2.6.3 Reconfiguring Process Plans (RPP) and Its Significance 40
2.6.4 Process Planning for Reconfigurable Machines 41
2.7 Discussion and Conclusions 42
References 44

3 Focused Flexibility in Production Systems
W. Terkaj, T. Tolio and A. Valente 47
3.1 The Importance of Manufacturing Flexibility in Uncertain Production Contexts 47
3.1.1 Focused Flexibility Manufacturing Systems – FFMSs 48
3.2 Literature Review 50
3.3 Proposal of an Ontology on Flexibility 51
3.4 Analysis of Real Systems 55
3.4.1 Lajous Industries SA Case Study 55
3.4.2 Riello Sistemi Case Study 58
3.5 Using the Ontology on Flexibility to Support System Design 60
3.6 Conclusions and Future Developments 63
References 64

Part II Physical Enablers

4 Control of Reconfigurable Machine Tools
G. Pritschow, K-H. Wurst, C. Kircher and M. Seyfarth 71
4.1 Introduction 71
4.1.1 Basic Idea for Reconfigurable Machine Tools and Systems . 72
4.1.2 Initial Situation in Machining Systems and Machine Tools . . 72
4.2 State of the Art 75
4.3 Configurable and Reconfigurable Machine Tools 77
4.3.1 Development of (Re)configurable Machine Tools 77
4.3.2 Conception of a Reconfigurable Machine Tool 80
4.4 Field Bus Systems Requirements 81
4.5 Configurable Control Systems 83
4.5.1 Middle-Ware 84
4.5.2 Configuration 85
4.5.3 Adjustment Mechanisms for Control Systems 85
4.5.4 Configuration Procedure 87
4.5.5 Development of a Control Configuration Tool 90

4.5.6 Configuration of a Control System by an Expert 90
4.6 Self-Adapting Control System for RMS 91
4.6.1 Elements of a Self-Adapting Control System 91
4.6.2 Extensions of Self-Adapting Control Systems 92
4.6.3 Method for Reconfiguration of the Self-Adaptable Control System 96
4.7 Summary and Conclusions 98
References 99

5 Reconfigurable Machine Tools for a Flexible Manufacturing System
M. Mori and M. Fujishima 101
5.1 Introduction 101
5.2 Reconfigurable Machine Tools Development 102
5.3 Application Examples 107
5.4 Summary 109
References 109

6 Reconfigurable Machine Tools and Equipment
E. Abele and A. Wörn 111
6.1 Introduction 111
6.2 Flexibility Requirements 113
6.3 Reconfigurable Multi-Technology Machine Tool (RMM) 116
6.3.1 Machine Tool Design 116
6.3.2 Modules 117
6.3.3 System Interfaces 121
6.3.4 Expert Tool for System Configuration 122
6.4 Summary 124
References 124

7 Changeable and Reconfigurable Assembly Systems
B. Lotter and H-P. Wiendahl 127
7.1 Introduction 127
7.2 Flexible Manual Assembly Systems 129
7.2.1 Single Station Assembly with Set-Wise Assembly Flow 130
7.2.2 Single Station Assembly According to the One-Piece-Flow Principle 131
7.2.3 Multi-Station Assembly According to the One-Piece-Flow Principle 132
7.3 Flexible Automated Systems 134
7.4 Hybrid Assembly Systems 136
7.4.1 Characteristics 136
7.4.2 Example of a Hybrid Assembly System 136
7.4.3 Analysis of the Results for Automated and Hybrid Assemblies 140

7.5 Conclusion 141
References 141

Part III Logical Enablers

8 Unified Dynamic and Control Models for Reconfigurable Robots
A.M. Djuric and W.H. ElMaraghy 147
8.1 Design of Reconfigurable Modules for the Reconfigurable Robotics, Automation and Intelligent Systems Industry 147
8.1.1 Description of a Robot Model 148
8.1.2 Reconfigurable Aspects of Industrial Robotic Systems 148
8.1.3 Reconfigurable Kinematic and Dynamic Modules 149
8.2 Design of Reconfigurable Control Platform (RCP) 152
8.2.1 DC Motor Reconfigurable Position Control Design 152
8.3 Design of Reconfigurable Robot Platform (RRP) 157
8.4 Reverse Modeling of Reconfigurable Robot Meta-Model 158
8.5 Conclusions 159
References 160

9 Reconfigurable Control of Constrained Flexible Joint Robots Interacting with Dynamic and Changeable Environment
Y. Cao, H. ElMaraghy and W. ElMaraghy 163
9.1 Introduction 163
9.2 Dynamic Model of Flexible Joint Robot in Contact with Different Environment 166
9.3 Decoupled Controller Design 167
9.3.1 Contact with Rigid Surface 167
9.3.2 Contact with Stiff Environment 169
9.3.3 Contact with Dynamic Environment 169
9.4 Reconfigurable Control Scheme 171
9.5 Simulation Study 172
References 176

10 Reconfiguring Process Plans: A New Approach to Minimize Change
A. Azab, H. ElMaraghy and S.N. Samy 179
10.1 Introduction 180
10.2 Related Work 181
10.3 Conceptual Basis 183
10.4 Mathematical Modeling and Programming 184
10.5 A New Criterion in Process Planning 186
10.6 Computational Time Complexity 187
10.7 Application and Verification 187
10.7.1 Reconfigurable Assembly Planning of a Family of Household Products 187

10.7.2 Reconfigurable Process Planning for Machining of a Front Engine Cover Part Family 190
10.7.3 Concluding Remarks 192
10.8 Summary 192
References 193

11 Adaptive Production Planning and Control – Elements and Enablers of Changeability
H-H. Wiendahl 197
11.1 Introduction 197
11.2 The PPC Framework 199
11.2.1 Design Aspects of a Socio-Technical PPC System 200
11.2.2 PPC Design Matrix 201
11.3 Changeability of PPC Tools 202
11.3.1 Change Elements of PPC 203
11.3.2 Enablers of PPC Changeability 203
11.3.3 Building Blocks of PPC Changeability 204
11.4 Adaptive PPC Solutions 204
11.4.1 Functional Models 205
11.4.2 Planning and Control Methods 206
11.4.3 Data Models 207
11.4.4 Data Interfaces 208
11.5 Change Process in PPC 209
11.6 Summary and Further Research 210
References 211

12 Component Oriented Design of Change-Ready MPC Systems
M.A. Ismail and H.A. ElMaraghy 213
12.1 Introduction 213
12.2 Related Review 215
12.3 The New MPC System Characteristics 216
12.3.1 Component-Based Software Engineering (CBSE) 218
12.3.2 Component-Oriented Versus Object-Oriented Programming 219
12.4 Mini-Case Study: Component-Based Aggregate Production Planning System Framework 219
12.4.1 System Architecture 219
12.4.2 Change-Ready MPC Framework 220
12.5 Discussion and Conclusions 224
References 225

13 Dynamic Capacity Planning and Modeling Its Complexity
A. Deif and H. ElMaraghy 227
13.1 Introduction 227
13.1.1 The Dynamic Capacity Problem 227

13.1.2 Complexity vs. Uncertainty . . . 228
13.1.3 Complexity in Dynamic Capacity Planning . . . 229
13.2 Literature Review . . . 229
13.3 System Dynamic Model for Multi-Stage Production . . . 231
13.3.1 Multi Stage Production System . . . 231
13.3.2 Model Nomenclature . . . 232
13.3.3 Mathematical Model . . . 233
13.4 Numerical Simulation of Industrial Case Study . . . 236
13.4.1 Overview of the Multi-Stage Engine Block Production Line 236
13.4.2 Input Data . . . 236
13.4.3 Numerical Simulation Results . . . 238
13.5 Conclusions . . . 243
References . . . 244

Part IV Managing and Justifying Change in Manufacturing

14 Design for Changeability
G. Schuh, M. Lenders, C. Nussbaum and D. Kupke . . . 251
14.1 Production Trends in High-Wage Countries . . . 252
14.2 Introduction of a Target System for Complex Production Systems . . 253
14.2.1 Holistic Definition of Production Systems . . . 253
14.2.2 Target System for Complex Production Systems . . . 254
14.2.3 Differentiation Between Complicated Systems and Complex Systems . . . 256
14.3 Approach to Mastering Complexity in Production Systems . . . 257
14.3.1 Object-Oriented Design . . . 257
14.3.2 Object-Oriented Management of Production Systems . . . 258
14.4 Case Studies . . . 261
14.4.1 A: Object-Oriented Production Design . . . 262
14.4.2 B: Release-Engineering in the Automotive Industry . . . 263
14.5 Summary . . . 265
References . . . 266

15 Changeability Effect on Manufacturing Systems Design
T. AlGeddawy and H. ElMaraghy . . . 267
15.1 Introduction . . . 267
15.2 Synthesis of Manufacturing Systems . . . 268
15.2.1 Enabling Changeability in Systems Frameworks . . . 268
15.2.2 Effect of Changeability Enablers on the Factory Level Design . . . 271
15.2.3 Changeability Effect on Machine Level Design . . . 273
15.2.4 Product Design Directions . . . 274
15.3 Changeability Integration into the Design Process . . . 276
15.3.1 The System-Product Changeability Design Loop . . . 276

15.3.2 Biological Evolution/Co-Evolution Analogy 278
15.4 Final Remarks 279
References 280

16 Managing Change and Reconfigurations of CNC Machine Tools
R. Hedrick and J. Urbanic 285
16.1 Introduction 285
16.1.1 Reconfiguration Considerations 287
16.2 The Change or Reconfiguration Management Methodology 289
16.3 Pneumatic Flow Control Valve Case Study 294
16.4 Summary and Conclusions 299
References 300

17 Economic and Strategic Justification of Changeable, Reconfigurable and Flexible Manufacturing
O. Kuzgunkaya and H.A. ElMaraghy 303
17.1 Introduction 303
17.2 Literature Review 304
17.3 Proposed RMS Justification Model 305
17.3.1 Financial Objective 308
17.3.2 System Complexity 309
17.3.3 System Responsiveness 310
17.3.4 Overall Model 310
17.4 Illustrative Example 313
17.4.1 Comparison of Reconfigurable and Flexible Scenarios over the System Life Cycle 315
17.4.2 FMS and RMS Comparison Through Life-Cycle Simulation 317
17.5 Conclusions 318
References 319

18 Quality and Maintainability Frameworks for Changeable and Reconfigurable Manufacturing
W.H. ElMaraghy and K.T. Meselhy 321
18.1 Introduction 322
18.2 Quality and the Manufacturing System Design 322
18.3 Changeable Manufacturing and Quality 325
18.4 Effect of Reconfigurable Manufacturing System Design on Quality . 328
18.5 The Changeability and Maintainability Relationship 330
18.6 Conclusion 333
References 334

19 Maintenance Strategies for Changeable Manufacturing
A.W. Labib and M.N. Yuniarto 337
19.1 Introduction 337
19.2 Recent Developments 338
19.3 Current Research and Trends 338
19.3.1 Model of Integration Between Intelligent Manufacturing Control System and Intelligent Maintenance System 339
19.3.2 Fuzzy Logic Controller I and II (FLC I and II) 341
19.3.3 Fuzzy Maintenance and Decision Making Grid 344
19.4 Case Study 348
19.5 Conclusions and Future Research 349
References 350

Part V Future Directions

20 The Cognitive Factory
M.F. Zäh, M. Beetz, K. Shea, G. Reinhart, K. Bender, C. Lau, M. Ostgathe, W. Vogl, M. Wiesbeck, M. Engelhard, C. Ertelt, T. Rühr, M. Friedrich and S. Herle 355
20.1 Introduction 356
20.2 Intelligence in Automated Systems 356
20.3 Cognitive Technical Systems 359
20.4 The Cognitive Factory 360
20.4.1 Vision and Goals 360
20.4.2 Core Aspects to Achieve the Cognitive Factory 362
20.5 Summary and Outlook 368
References 369

21 Migration Manufacturing – A New Concept for Automotive Body Production
T.P. Meichsner 373
21.1 Initial Situation 373
21.2 Development of the Basic Concept 376
21.3 Operating Phases of the Migration Concept 380
21.4 Practical Evaluation and Implementation 382
21.5 Conclusion and Outlook 385
References 387

22 Changeable Factory Buildings – An Architectural View
J. Reichardt and H-P. Wiendahl 389
22.1.1 The Factory Planners View 390
22.1.2 The Challenge: Multi-User, Changeable and Scalable Buildings 392
22.2 Performance and Constituent Components of Factory Buildings 394

22.2.1 Form Follows Performance 394
22.2.2 Building Components 395
22.3 Synergetic Planning of Processes, Logistics and Buildings 397
22.4 Industrial Example of a Transformable Factory 398
22.5 Conclusion 400
References 401
