Introduction 1
A.V. Mikhailov
References 15

1 Symmetries of Differential Equations and the Problem of Integrability 19
A.V. Mikhailov and V.V. Sokolov
1.1 Introduction 19
1.2 Symmetries and First Integrals of Finite-Dimensional Dynamical Systems 20
1.3 Basic Concepts of the Symmetry Approach 32
1.4 Modifications and Generalizations 52
1.5 Short Description of Solved Classification Problems and References 73
References 85

2 Number Theory and the Symmetry Classification of Integrable Systems 89
J.A. Sanders and J.P. Wang
2.1 Introduction 89
2.2 The Symbolic Method 91
2.3 An Implicit Function Theorem 96
2.4 Symmetry-Integrable Evolution Equations 98
2.5 Evolution Systems with k Components 105
2.6 One Symmetry Does not Imply Integrability 108
2.7 Concluding Remarks, Open Problems and Further Development . . 113
2.8 Some Irreducibility Results by F. Beukers 114
2.9 The Filtered Lie Algebra Version of the Implicit Function Theorem 115
References 116

3 Four Lectures: Discretization and Integrability. Discrete Spectral Symmetries 119
S.P. Novikov
3.1 Introduction 119

3.2 Continuous and Discrete Spectral Symmetries of 1D Systems and Spectral Theory of Operators. 1D Continuous Schrödinger Operator and Its Discrete Analogue 120
3.3 2D Schrödinger Operator. Discrete Spectral Symmetries, Spectral Theory of the Selected Energy Level and Space/Lattice Discretization 124
3.4 Discretization of the 2D Schrödinger Operators and Laplace Transformations on the Square and Equilateral Lattices 128
3.5 2D Manifolds with the Colored Black–White Triangulation. Integrable Systems on a Trivalent Tree 133
References 137

4 Symmetries of Spectral Problems 139
A. Shabat
4.1 Lie-Type Symmetries 139
4.2 Discrete Symmetries 153
References 172

5 Normal Form and Solitons 175
Y. Hiraoka and Y. Kodama
5.1 Introduction 175
5.2 Perturbed KdV Equation 178
5.3 Conserved Quantities and N-Soliton Solutions 180
5.4 Symmetry and the Perturbed Equation 184
5.5 Normal Form Theory 187
5.6 Interactions of Solitary Waves 195
5.7 Examples 201
References 212

6 Multiscale Expansion and Integrability of Dispersive Wave Equations . 215
A. Degasperis
6.1 Introduction 215
6.2 Nonlinear Schrödinger-Type Model Equations and Integrability . . 225
6.3 Higher Order Terms and Integrability 234
References 243

7 Painlevé Tests, Singularity Structure and Integrability 245
A.N.W. Hone
7.1 Introduction 245
7.2 Painlevé Analysis for ODEs 249
7.3 The Ablowitz–Ramani–Segur Conjecture 254
7.4 The Weiss–Tabor–Carnevale Painlevé Test 257
7.5 Truncation Techniques 261
7.6 Weak Painlevé Tests 267
7.7 Outlook 273
References 275

8 Hirota's Bilinear Method and Its Connection with Integrability 279
J. Hietarinta
8.1 Why the Bilinear Form? 279
8.2 From Nonlinear to Bilinear (KdV) 280
8.3 Multisoliton Solutions for the KdV Class 283
8.4 Soliton Solution for the mKdV and sG Class 290
8.5 The Nonlinear Schrödinger Equation 294
8.6 Hierarchies 303
8.7 Bilinear Bäcklund Transformation 305
8.8 The Three-Soliton Condition as an Integrability Test 306
8.9 From Bilinear to Nonlinear 310
8.10 Conclusions 312
References 312

9 Integrability of the Quantum XXZ Hamiltonian 315
T. Miwa
9.1 Integrability 315
9.2 Symmetry 319
References 323
